What is AWE- EnduroSolv®?

Air Water Earth is excited to offer our customers AWE- EnduroSolv® Water Treatment Products, the next generation of cooling tower and boiler treatment. It not only provides all the benefits of traditional water treatment chemicals, but also offers many advantages for your employees and customers. AWE- EnduroSolv® uses state of the art proven chemicals, manufactured into a SOLID concentrate, transported in a low carbon footprint profile, and applied easily at your site using a patented dissolving system. You receive all of the benefits of a well run chemical program, without the hassles of dealing with liquids. AWE-EnduroSolv® is packaged in four x 1 gallon containers per case, each case weighing 40 to 50 lbs. One case of AWE- EnduroSolv® replaces one 200 liter drum of concentrated liquid boiler or cooling water treatment!

**AWE- EnduroSolv® can help
you Reduce the Carbon
Footprint of your Facility.**

Water treatment without the drums- see the difference for yourself.

The AWE- EnduroSolv mix-on-site system combined with our 1-gal plastic bottle of concentrated water treatment chemicals replaces traditional drums, pails, and totes. You get superior water treatment performance in less space, with less mess and less hassle.

- Reduce scale
- Combat corrosion
- Reduce maintenance & equipment repair costs
- Reduce energy costs
- Prevent biological growth

Help Reduce Risk & Liability Concerns

Using AWE-EnduroSolv® products can help you **REDUCE RISK & LIABILITY ISSUES** in many ways:

- No heavy drums to move. This substantially reduces the potential for injury to your employees and others in your care. A 55-gallon drum weighs over 500 pounds. Moving these heavy drums can result in Back Injury, Toe Injury, or Finger Injury; any of which can lead to costly Workman's Compensation Claims.
- Eliminate Spill potentials. With liquid chemicals, spills can occur anywhere - in transit to your facility, or at your facility. Many chemicals can be hazardous to human health, damaging to the environment, and a potential for extensive and expensive litigation. These risks can be eliminated with your use of AWE-EnduroSolv® products.
- No pails of chemicals to move. This reduces the risk of injury and exposure of hazardous chemicals (including corrosives, oxidizers, and pesticides) to your employees and customers.
- No drum disposal issues. When your chemical drum arrives at your facility, it has two names on it: 1) the supplier; and 2) YOURS. These same names are on the drum when it leaves your facility. Are you sure it was empty? Are you sure it was properly triple rinsed? With AWE- EnduroSolv®, not only is the product dissolved 100%, even the product jar is recyclable.
- No On-site Storage issues. Not only are liquid chemicals bulky, they must also be stored in containment areas according to their hazardous classification. Many facilities do not have this kind of "extra" space, and resort to storing all chemicals in one containment area. The potential for chemical reactions of two different liquids can produce very undesirable results.

Whether you're looking to become LEEDS Certified or just looking for ways to make your facility more Green, AWE- EnduroSolv® can help:

- No Liquids to Spill
- No Drum Disposal Issues
- No Exposure to Hazardous Chemicals
- No offensive Odors or Fumes
- No Powders to Irritate
- Substantially reduced Product Handling Issues
- Safe and Simple to apply
- Environmentally friendly products
- Cleaner, safer work area
- Conserve floor space
- Assists in continuous improvement for ISO 14001

With AWE- EnduroSolv®, your water treatment program can be truly **GREEN**.
